## EXPERIENCE

### AI Product Engineer
**Skilladder AI** — **May 2025 - Present, Remote**

- Took the AI assessment platform from proof of concept to production as product lead and primary builder, used by **32+ enterprise clients** including Cowrywise, ALX, Honeywell Group and Kuda, with **100,000+ completed assessments**.
- Cut AI grading cost from about **$30 to $8 a week** by moving to Haiku 4.5 after a 50-answer shadow comparison showed average scores within one point of Sonnet 4.5, then reused the method for Haiku 5.5.
- Helped maintain Nigeria's 3MTT contract and was instrumental in **3,000 job placements** through the programme, with Skilladder as its assessment platform.
- **Recovered candidates** a client had lost to drop-off by building a first accessible version of the assessment flow in three days, for screen readers, keyboard navigation and low-end Android.

### Product Manager
**Tellerpoint** — **May 2024 - March 2026, Remote**

- Helped bring UnionDirect, Union Bank of Nigeria's agency banking platform, **into production** across agent apps, a terminal app and an admin dashboard, closing 16 vulnerability findings with the bank's InfoSec team.
- **Settled UnionDirect's scope** after Union Bank asked for features beyond the contract, checking all 113 requests against it and writing the Phase 2 requirements for the rest.

### Product Manager
**Switch Recycling** — **September 2022 - May 2024, Lagos, Nigeria**

- Redesigned the Request workflow across mobile and web using drop-off data, and scoped and shipped digital wallet and bill-payment features.

## PROJECTS

### Agentic Job Pipeline
**Personal system** — **September 2026 - Present**

- Built an agent pipeline that pulls roles from 20+ sources, scores them against a candidate profile, tailors CVs and matches Gmail replies to applications, with **35 interview invitations** to date.
- Kept the scoring model from inventing the overall score by computing it in code, and required it to quote the posting before failing a role.

### Orderflow and Autopapers NG, WhatsApp Commerce
**Tellerpoint consulting, sole engineer** — **April 2026 - Present**

- Shipped Orderflow and Autopapers NG to a **production pilot in under five months** as sole engineer, on Kotlin/Spring Boot and Next.js.
- Built per-order virtual-account collections through Rubies and Squad, Rubies payouts, and merchant settlement that nets out fees, tax and refunds.

## SKILLS

**Development** · TypeScript, React, Next.js, Node.js, Kotlin, Spring Boot, Python, SQL
**Data and integrations** · PostgreSQL, Supabase, MySQL, REST APIs, webhooks, MQTT
**Applied AI** · RAG, vector databases, AI grading, human review, Claude Code, Codex, Cursor
**Product delivery** · Customer discovery, API design, enterprise implementation, accessibility, Linear, Figma, Postman

## EDUCATION

Bachelor of Laws, LL.B, Lagos State University — **2018**

## LANGUAGES

**English** · Native/C2
**German** · A1, actively learning
